

CARBON REDUCTION PLAN

Our Commitment to achieving Net Zero:

Target

Infotec is committed to developing a comprehensive and credible carbon reduction strategy, that will improve our environmental performance and help us to achieve our target of reaching Net Zero emissions by 2050.

Measurement and Review

Following initial assessment of baseline emissions greenhouse gas emissions have been calculated according to the GHG Protocol methodology using the best data available from expense and activity-based data sources.

All measurement and reporting is in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting, PPN 06/21.

Stage One

To guide our progress to achieving Net Zero, we have adopted the following Journeo PLC Group carbon reduction targets:

- Achieve 30% reduction in emissions across Scopes 1 and 2 by 2030 (approximately a 7% reduction year-on-year) against the 2024 baseline year.
- Achieve 30% reduction on Scope 3 emissions (excluding emissions in scope 3.1) by 2035 against the 2024 baseline year.

Action

Environmental management projects to reduce carbon include focus on product research and development to include low-energy consumption components, such as LEDs and TFT backlights.

We will also implement further measures such as:

- Installation of LED lighting and motion sensors.
- Transition to 100% renewable electricity supply to our premises with renewable energy tariffs.
- Work with our customers to evaluate product transportation and prioritise sea and land freight.
- Adopt the use of recycled materials within our products.

Related Information

As part of the Journeo PLC Group, the above Infotec statement aligns also with the overall Carbon Reduction Plan, which can be viewed here: <https://journeo.com/wp-content/uploads/2025/07/journeo-plc-carbon-reduction-plan-july-2025.pdf>
