Infotec is the UK's undisputed leader in Passenger Information systems and our solutions are the benchmark for the UK rail market.

Infotec displays are installed in 92% of UK railway stations, making us the most trusted name in station passenger communications.

Our pedigree is built on decades of design, manufacturing excellence, reliability and whole-life support in the UK.

That proven capability now provides a strong platform for broader transport and international growth.

**Infotec, the UK's leader in
passenger information systems**

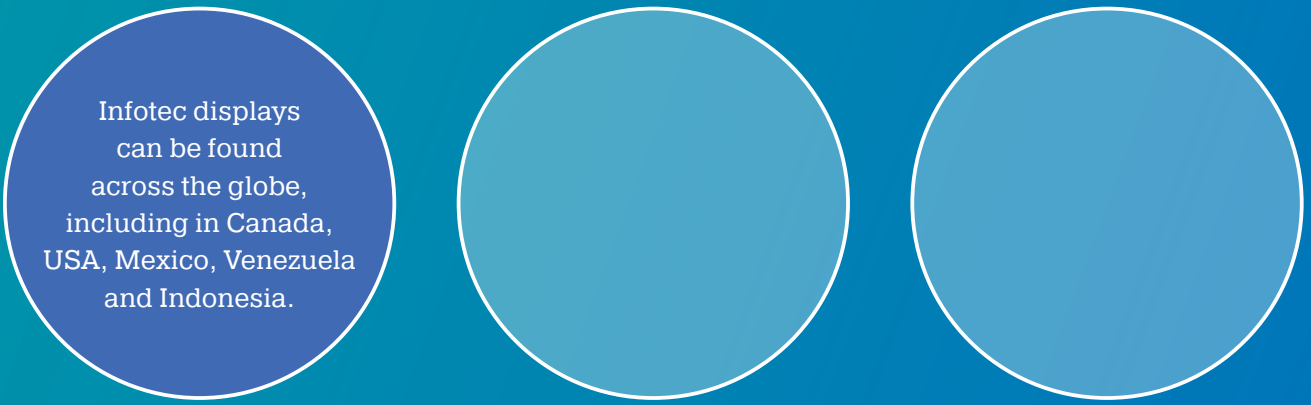

Creating a world class passenger information system can be a puzzle...

Infotec has all of the pieces to shape a solution to meet your needs.

We are the leading expert in our field through a full appreciation of what our clients are seeking to achieve.

We speak their language and share their passion for customer service. Dedication, experience and a detailed understanding of the industry are brought to every aspect of every project.

Infotec works in collaboration with you to provide the appropriate technology for your needs. And our commitment to excellence in manufacturing and service is absolute.

Infotec displays
can be found
across the globe,
including in Canada,
USA, Mexico, Venezuela
and Indonesia.

Javelin CMS

Cloud-based Javelin collects, manages and aggregates data to provide optimum presentation

Javelin Client

The display client integrates Javelin CMS to populate displays with data and graphical/image

Station displays

Low energy displays to cater for every need from small remote stations to major station concourses

On-vehicle displays

State-of-the art displays purpose-designed for internal and external use to provide data, maps and graphics

Asset management

Javelin CMS regularly scans the display estate and notifies of any anomalies by text or email

Real-time data feeds

Javelin CMS gathers information from industry standard sources to provide vital real-time information.

Web and social feeds

Javelin CMS also collects, analyses and aggregates data from websites and social feeds.

Multimodal data

Javelin CMS gathers data from numerous sources, aggregates and transmits them to a display as a single presentation

Javelin Content Management System

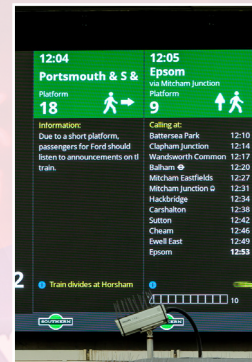

Working with Network Rail at several major stations, Infotec has supplied full colour LED mainboards, designed to enhance customer experience, increase safety and improve passenger flow.

- Clearer and more accessible information
- Wayfinding, platform and boarding information
- Flexible presentation for disruption, incident and event information
- Integration of interchange and local transport information

New products start with the clients – what is developed not only achieves but often surpasses the initial concepts.

Knowledge

Infotec is made up of transport people, with a common culture of taking the initiative and delivering with a can-do attitude.

It works with those engaged in the planning, design, construction and installation of both rolling stock and station CIS systems. Infotec supports its customers from the development of initial concepts through to the full implementation of passenger information display systems.

It has an intimate understanding of the challenges clients face, and the knowledge and experience to identify and deliver the correct and most robust solutions.

By bringing skills and understanding to the development process, it can ensure customer needs and wants are met from the very beginning.

Infotec's latest range of passenger information displays feature fine pitch RGB LED technology to increase passenger experience, accessibility and information delivery.

They are perfect for presenting enhanced journey information, such as ETAs and delays, loading and zoning details, and disruption or emergency messaging.

With the additional capability to handle richer media and accessibility feeds, like British Sign Language, they can also play a role in creating railways that are accessible for all.

Design, development, manufacture and testing of Infotec products is all done in-house.

Innovation

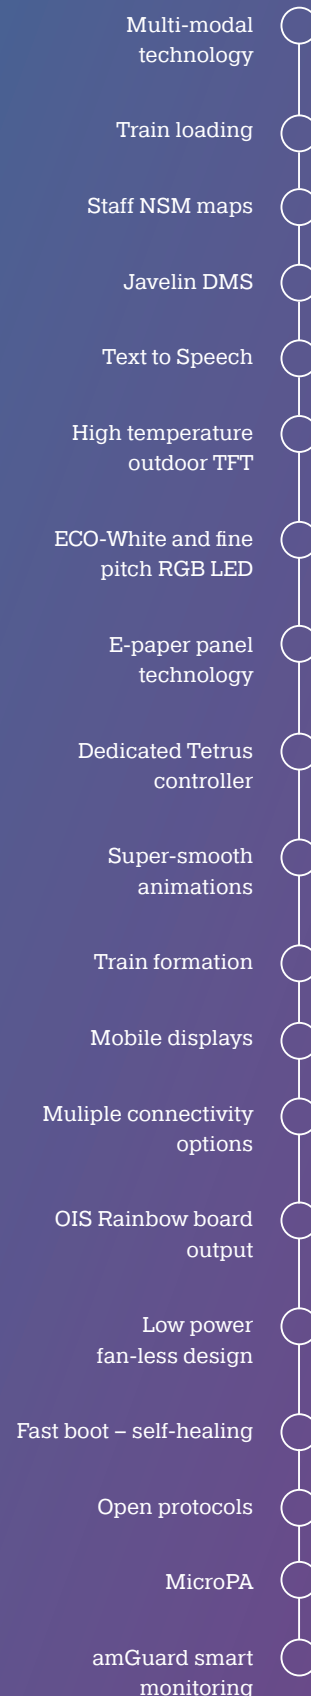

Innovation is about asking the right questions

Infotec evaluates results, monitors operations and keeps its finger on the pulse of the industry to help drive innovation.

Change does not happen for the sake of it, developments are introduced to meet the needs and budgets of a sector under ever-increasing public demand.

Infotec listens to its clients, and to the travelling public, to maintain focus on developments that will add value, deliver results and increase satisfaction.

Investment is made in people and processes to stay at the forefront, which with the development of innovative products meet the needs of the marketplace.

Passenger Safety

Northern passengers now benefit from the latest passenger information solutions, with Infotec displays and CMS providing on-board information in an attractive and accessible way.

Customers are presented with all the details they need to stay informed about their journey and connecting services, with the on-train information helping to maintain customer satisfaction in times of disruption.

- Real time information
- Smart triggering of message changes and display updates
- PSR and TSI compliance
- 586 displays deployed on 259 units

Quality

Infotec has gained independent approval of its hardware, systems and procedures. The class-leading performance of its robust product line is a testament to this.

Official standards held include Network Rail PADS approvals, ISO 9001:2015 certification, and full compliance to EME/EN standards.

This vigorous approach to quality involves a highly trained workforce, rigorously audited procedures, strong environmental awareness and outstanding testing facilities.

While audits and certificates tell part of the story, the true test is provided by the performance of Infotec's products in the field, which is second to none.
